

Language Based Security

Summer Semester 2006

4. Homework

07 June 2006

Exercise 1:

Consider the class definition

```
public class FactRec {  
    public static int fact (int n) {  
        if (n==0) return 1; else return n * (fact (n-1));  
    }  
}
```

The bytecode corresponding to the function `fact` is below.

```
public static int fact(int); 3 stack slots, 1 register  
0:  iload_0  
1:  ifne 6  
4:  iconst_1  
5:  ireturn  
6:  iload_0  
7:  iload_0  
8:  iconst_1  
9:  isub  
10: invokestatic #2; //Method FactRec.fact.int(int)  
13: imul  
14: ireturn
```

- a) Give type level abstract interpretation rules for the instructions `ifne`, `isub` and `imul`.
- b) Apply the bytecode verification discussed in the lecture on this code.
