

Language Based Security

Summer Semester 2006

7. Homework

28 June 2006

Exercise 1:

Modify the `runClass` class discussed in the lecture to load a given class from a given url using the URL class loader, and run the main method of that class.

- a) Modify the class now by adding a policy stating which classes loaded from which urls have read, write, delete and execute permissions on local files.
- b) State this using a policy file instead of coding it in the class definition.
